📁 Projects

n8n Automation & Chatbot Projects I specialize in using n8n to automate business workflows — from email marketing, lead generation, and scheduled notifications to building AI-powered chatbots for websites, HR assistance, and real-time customer support — reducing manual effort and improving efficiency
Nirmal PMS – Product Management System (Django) Developed a product management system featuring job entry, cylinder entry, Proforma Invoice generation, quotation management, and automated email dispatch to clients. The system streamlined daily operations, reduced manual workload, and improved overall business efficiency.
Young India Ahmedabad – Admin Management System (Django) Developed a dual admin panel with forgot password functionality and various software solutions for Young India Ahmedabad. Implemented Django-based full-stack functionalities, including authentication, user roles, and database management, ensuring smooth operations and automation.

Jewelry Shop Website

(Django)

A platform with login/signup, user management, and CRUD operations for showcasing new collections.

Skill Nation Visualization Project

(Power BI)

A standalone data visualization project created entirely using Power BI Desktop, showcasing interactive dashboards and insights.
